

[SUM26] Capstone project

**BackTestBench: modular backtesting and sandbox
platform for trading strategies**

Customer: Aleksey Potemkin, Innopolis University

Team:

Marat Diiarov - m.diiarov@innopolis.university

Liubov Utenysheva - l.utenysheva@innopolis.university

Georgii Beliaev - g.beliaev@innopolis.university

Bogdan Zinchenko - b.zinchenko@innopolis.university

Samy Badavi - s.badavi@innopolis.university

Maxim Kharlamov - m.kharlamov@innopolis.university

Philip Oghenerukevwe Idiare - p.idiare@innopolis.university

Nikolay Taran - n.taran@innopolis.university

Week 1 of working on a project.

The team gathered, made chat, discussed and chose the project. Later the meeting with customer was planned. Before the meeting the whole team took a deeper look at the project theme and defined the needed roles to present to the customer.

On 07.06.2026 was the first meeting with the project owner (Aleksey Potemkin). Marat introduced the team and the discussion started. Liubov made a recording and later a transcription of it to make notes and collect all requirements in one document. Bogdan, Samy, Maxim, Philip and Nikolay asked customer prepared before questions about the functionality. The whole team also was involved in discussing with the customer the architecture of the product.

Later the whole team gathered to clarify all details and check if all people understand what this project is about.

Liubov and Georgii made a document [first meeting](#) and formulated all the requirements, roles, components of architecture and plan for 6 weeks. Marat, Nikolay and Maxim worked on correctly defining and setting the roles. Samy, Bogdan and Philip were building the final version of architecture and its description.

On 10.06.2026 Samy, Marat, Liubov, Bogdan and Maxim met with Gerald (TA) and discussed the progress and tasks.

Marat set the GitHub repository with the backlog

[Muratich/BackTestBench](#)

Liubov prepared this report and also notes about first meeting with TA
